Graduate Recruitment Team

LCP Delta

Argyle House, Lady Lawson Street

Edinburgh EH3 9DR

Dear Sir or Madam,

I am applying for the Energy Research Analysis Graduate Programme (September 2027) in Edinburgh. I am a final-year Economics student at the University of Strathclyde, graduating in summer 2027 with a predicted 2:1. LCP Delta's Edinburgh research team, whose European Energy Transition report forecasts 13% annual growth in UK household electrification to 2030, works on the questions about energy demand and flexibility that my studies keep returning to.

The work I am proudest of follows a consulting arc: diagnose with data, recommend a change, then make it happen. At KONG, I analysed sales patterns and used them to refine our upselling prompts, raising average customer spend by an estimated 25%. As Head Mixologist at Le Set, a new 200-cover restaurant and cocktail lounge in Glasgow, I created the house cocktails and set the specifications for its classics from launch, wrote the batch specifications the team works to, and trained around 15 bar staff, several new to cocktail bartending, to deliver them consistently.

Consulting appeals to me for the range of problems and the standard of thinking it demands: a recommendation has to be structured, evidenced and clear enough for a client to act on. My dissertation applies the same discipline to a broad question, whether news improves forecasts of European gas volatility, by breaking it into testable parts using mixed-frequency (MIDAS) models and out-of-sample comparisons against benchmarks. In co-founding the Strathclyde Agricapital Society, I built an organisation from launch to 126 members and led weekly sessions on transactions such as Olam Agri's USD 1.24bn stake sale to SALIC.

LCP Delta stands out to me because its graduates support both one-off client projects and subscription research on how households and businesses use energy, using data, insights and models to advise clients from energy majors to start-ups. My dissertation builds forecasts from storage, market and news data, and I would like to apply the same mix of econometrics and clear writing to research that clients rely on, without leaving Scotland.

I would welcome the opportunity to discuss my application. Thank you for your time and consideration.

Yours faithfully,

Will McGowan
