Graduate Recruitment Team
Susquehanna International Group
34th Floor, 110 Bishopsgate
London EC2N 4AY

Dear Sir or Madam,

I am applying for the Quantitative Trader – Graduate: 2027 role in London. I am a final-year Economics student at the University of Strathclyde, graduating in summer 2027 with a predicted 2:1. Susquehanna's training in game theory and decision-making under uncertainty appeals to me because those are the skills I rely on at the poker table.

Most of what I am proudest of comes down to good decisions made with incomplete information. Playing 12 poker tables at once, I based every decision on expected value and set my stakes with the Kelly criterion, keeping at least 50 buy-ins because an edge estimated from my own results could be overstated. I also finished 14th at the Irish U19 Chess Championships in 2023 and won 21 of 22 games in a simultaneous exhibition against players with an average FIDE rating of 1860. As Vice-President and then President of the Strathclyde Poker Society, I ran weekly tournaments for around 60 players on a £600 budget per semester and taught new members to use the same method to work out how many buy-ins their own win rate, variance and risk tolerance call for.

I pair that instinct with quantitative work I can defend line by line. I built a Monte Carlo option pricer in which a geometric-Asian control variate cut the standard error of arithmetic-Asian estimates by 97% at 100,000 paths, and my dissertation tests whether sovereign oil hedges make petro-currencies' oil betas smaller, kinked or one-sided on OPEC announcement days, with a pre-registered test of whether what remains is tradable. Proprietary trading appeals to me because the feedback is immediate and impartial: every decision is priced, and improving means learning faster than the market. Nearly two years of busy bar shifts alongside full-time study, and now running the drinks programme as Head Mixologist at a new 200-cover Glasgow venue, have taught me to stay accurate when speed matters.

Susquehanna stands out to me because its graduate traders are embedded on a desk and managing risk within the first few months, after an education covering options and ETF trading, game theory and programming, and because its London office is still growing. My Monte Carlo pricing engine, benchmarked against Black-Scholes, gave me a first look at how volatility drives option value, and I would like to learn to apply that on a desk where every decision is priced.

I would welcome the opportunity to discuss my application. Thank you for your time and consideration.

Yours faithfully,

Will McGowan
