Graduate Recruitment Team

Gunvor SA

80-84 Rue du Rhône

1204 Geneva, Switzerland

Dear Sir or Madam,

I am applying for the Global Graduate Program 2027 – Trading & Supply Chain in Geneva, with a particular interest in natural gas, LNG and power. I am a final-year Economics student at the University of Strathclyde, graduating in summer 2027 with a predicted 2:1. Gunvor's energy segment of natural gas, LNG and power delivered its strongest result in 2025, and the firm matched its full-year 2025 gross profit in the first quarter of 2026 alone, which makes its gas and LNG business the part of commodity trading I most want to learn.

Much of my work centres on commodity markets. My dissertation, supervised by Dr Luigi Gifuni, tests whether governments that hedge oil change how their currencies react to OPEC news: whether Norway's krone conversions, Russia's 2017–22 budget rule and Mexico's put hedge make the oil beta smaller, kinked or one-sided, and whether any beta that remains can be traded after costs. As co-founder of the Strathclyde Agricapital Society, which I grew to 126 members, I built a wheat calendar-spread strategy in R from futures curve structure and CFTC Commitments of Traders positioning, and published weekly research notes for members.

Sales and trading appeals to me because it joins analysis to a live price and to a client who needs a clear answer quickly. Writing those weekly notes taught me to turn analysis into a view that non-specialists can act on. In nearly two years at KONG, I learned that a recommendation lands only when it fits the person hearing it: by analysing sales patterns and refining our upselling prompts, I raised average customer spend by an estimated 25%. I also take risk seriously: at the Strathclyde Poker Society, where I was Vice-President and then President, I taught new members to use the Kelly criterion to work out how many buy-ins their own win rate, variance and appetite for risk call for.

Gunvor stands out to me because it is a physical trader whose graduate programme rotates through trading desks, risk, operations and analytics in Geneva, with possible rotations in Singapore, Houston, Tallinn or London. Physical trading depends on storage, shipping and timing in ways that paper markets alone do not capture, and my dissertation's focus on how OPEC supply news moves markets gives me a starting point for learning the physical side of the business.

I would welcome the opportunity to discuss my application. Thank you for your time and consideration.

Yours faithfully,

Will McGowan
