Graduate Recruitment Team

Capital Dynamics

London

Dear Sir or Madam,

I am applying for the Analyst, Clean Energy role in London. I am a final-year Economics student at the University of Strathclyde, graduating in summer 2027 with a predicted 2:1. Capital Dynamics' £100 million joint venture with Solo Renewables for long-duration energy storage in Northern Ireland caught my attention as someone from Belfast who studies volatility in European energy markets.

My preparation for investing has come from taking deals apart. As co-founder and Treasurer of the Strathclyde Agricapital Society, the university's first agri-finance society, I grew membership to 126 and led weekly research sessions on transactions such as Olam Agri's USD 1.24bn stake sale to SALIC, breaking down why the buyer wanted the asset, how the deal was structured and how the stake was valued. My strongest academic results reflect the same interest: 90% in first-year Finance and 78%, the second-highest mark, in a third-year group project for Advanced Corporate Finance and Financial Markets.

Private equity appeals to me because the investor owns the outcome: the thesis has to be delivered after the deal closes, not just argued before it. I have seen that side at a small scale. As Head Mixologist at Le Set, a new 200-cover Glasgow venue, I created its house cocktails, set the specifications for its classics and trained around 15 bar staff to deliver them from launch. Before that, at KONG, I analysed sales patterns and refined our upselling prompts, raising average customer spend by an estimated 25%. Both roles taught me that value is created in execution: in standards, training and small commercial decisions that compound.

Capital Dynamics stands out to me because its clean energy team invests directly in the assets the energy transition needs, from two UK solar projects of at least 121 MWp acquired in December 2025 with Contracts for Difference to a 170 MW, four-hour battery project in the Republic of Ireland. My dissertation studies how energy-price risk is hedged and who ends up bearing it, and I would like to apply that thinking to the revenue risks of solar and storage assets at a firm of around 150 professionals where an analyst's work is visible.

I would welcome the opportunity to discuss my application. Thank you for your time and consideration.

Yours faithfully,

Will McGowan
